Zong, P. p277
Zou Wei p265

ARTIFICIAL INTELLIGENCE

Fuzzy-based adaptive partial parallel interference canceller for CDMA communication systems over fading channels p111

CODES AND DECODING

Analysis of the decoding process of T-codes p202
Blind adaptive receiver for coded multicarrier DS-CDMA systems in multipath fading channels p171
Bounds for finite block-length codes p65
Collision resolution in contention access local area networks using concatenated prime sequences p249
Concatenated convolutional and differential codes in interference-suppressed DS-CDMA systems p99
Concatenated wavelet-based ring-TCM p189
Decoding of generalised low-density parity-check codes using weighted bit-flip voting p1
Generalised Berlekamp-Massey algorithm p207
Interleaving and termination in unpunctured symmetric turbo codes p6
Modelling of a VSAT link physical layer fade countermeasure controlled at the data link layer p277
Modified branch metric for turbo codes using PSA technique in Rician fading channels p227
Multirate asynchronous optical CDMA system with product code p299
Nonlinear orthogonal spreading sequence design for third generation DS-CDMA systems p105
Puncturing effects on turbo codes p132
Two-error-location for quadratic residue codes p129

COMMUNICATION SYSTEM THEORY

Accurate error rate estimate using moment method for optimum diversity combining and MMSE equalisation in digital cellular mobile radio p157
Analysis of dynamic service separation with trunk reservation policy p23
Blind adaptive receiver for coded multicarrier DS-CDMA systems in multipath fading channels p171
Blind equalisation technique based on an improved constant modulus adaptive algorithm p45
Capacity-coverage analysis of TDD and FDD mode in UMTS at 1920 MHz p51
Collision resolution in contention access local area networks using concatenated prime sequences p249
DC offset and IM2 removal in direct conversion receivers p179
Decorrelating detector for asynchronous CDMA channels with adaptive path selection p167
Destination-initiating path restoration protocol for wavelength-routed WDM networks p18
Efficient IP routing table lookup scheme p77
Explicit routing with QoS constraints in IP over WDM p83
Fault localisation and recovery in multichannel ATM switches p283
Fault recovery for zoned VP-based ATM networks p211
Fixed channel allocation scheme performance enhancement for cellular mobile systems p232
Fuzzy-based adaptive partial parallel interference canceller for CDMA communication systems over fading channels p111
IP routing by an optical spectral-amplitude-coding CDMA network p265
Markov decision theory framework for resource allocation in LEO satellite constellations p270
Modelling of a VSAT link physical layer fade countermeasure controlled at the data link layer p277
More realistic analysis for blocking probability in SDMA systems p152
Multiple additively constrained path selection p237
Multirate asynchronous optical CDMA system with product code p299
New frame-based network allocation vector for 802.11b multirate wireless LANs p147
Nonlinear orthogonal spreading sequence design for third generation DS-CDMA systems p105
Novel TCP congestion control scheme and its performance evaluation p217
Performance analysis of threshold based bandwidth allocation scheme for IP traffic on ATM networks p29
QoS-guaranteed fuzzy transmission controller for dynamic TDMA protocol in multimedia communication systems p292
Transmitter buffer behaviour of stop-and-wait ARQ schemes with repeated transmissions p13

COMPUTATIONAL COMPLEXITY

Blind equalisation technique based on an improved constant modulus adaptive algorithm p45
Decoding of generalised low-density parity-check codes using weighted bit-flip voting p1
Linear complexity of polyphase power residue sequences p195
Multiple additively constrained path selection p237

COMPUTER COMMUNICATIONS

Allocating wavelength converters in shared-per-link structure in WDM networks p185
Collision resolution in contention access local area networks using concatenated prime sequences p249
Efficient IP routing table lookup scheme p77
Integrated model for performance analysis of multiple class-of-service Internet p139
IP routing by an optical spectral-amplitude-coding CDMA network p265
Least load dispatching algorithm for parallel Web server nodes p223
Neural approach to detecting communication network events p257
New frame-based network allocation vector for 802.11b multirate wireless LANs p147
Performance analysis of threshold based bandwidth allocation scheme for IP traffic on ATM networks p29

CONTROL APPLICATIONS

Capacity-coverage analysis of TDD and FDD mode in UMTS at 1920 MHz p51

DATA COMMUNICATION

Efficient IP routing table lookup scheme p77
Least load dispatching algorithm for parallel Web server nodes p223
New frame-based network allocation vector for 802.11b multirate wireless LANs p147
Novel TCP congestion control scheme and its performance evaluation p217
Performance analysis of threshold based bandwidth allocation scheme for IP traffic on ATM networks p29

DATA HANDLING

Efficient IP routing table lookup scheme p77

DATA SECURITY

Linear complexity of polyphase power residue sequences p195

ELECTROMAGNETIC COMPATIBILITY

Blind equalisation technique based on an improved constant modulus adaptive algorithm p45
Capacity-coverage analysis of TDD and FDD mode in UMTS at 1920 MHz p51
Concatenated convolutional and differential codes in interference-suppressed DS-CDMA systems p99
DC offset and IM2 removal in direct conversion receivers p179
Fuzzy-based adaptive partial parallel interference canceller for CDMA communication systems over fading channels p111
Generalised approach for evaluation of outage performance in micro- and pico-cellular networks p123

ELECTRIC VARIABLES CONTROL

Capacity-coverage analysis of TDD and FDD mode in UMTS at 1920 MHz p51

ENGINEERING COMPUTING

Fuzzy-based adaptive partial parallel interference canceller for CDMA communication systems over fading channels p111
Power-spectrum-based neural-net connection admission control for multimedia networks p70

FILTERS AND FILTERING

Blind adaptive receiver for coded multicarrier DS-CDMA systems in multipath fading channels p171
Decorrelating detector for asynchronous CDMA channels with adaptive path selection p167

FUZZY CONTROL

Novel TCP congestion control scheme and its performance evaluation p217

INFORMATION THEORY

Capacity-coverage analysis of TDD and FDD mode in UMTS at 1920 MHz p51

INTERFERENCE SUPPRESSION

Concatenated convolutional and differential codes in interference-suppressed DS-CDMA systems p99
DC offset and IM2 removal in direct conversion receivers p179
Fuzzy-based adaptive partial parallel interference canceller for CDMA communication systems over fading channels p111

MATHEMATICAL TECHNIQUES

Concatenated wavelet-based ring-TCM p189
Decoding of generalised low-density parity-check codes using weighted bit-flip voting p1
Fuzzy-based adaptive partial parallel interference canceller for CDMA communication systems over fading channels p111
Nonlinear orthogonal spreading sequence design for third generation DS-CDMA systems p105

MOBILE RADIO

Accurate error rate estimate using moment method for optimum diversity combining and MMSE equalisation in digital cellular mobile radio p157
Blind adaptive receiver for coded multicarrier DS-CDMA systems in multipath fading channels p171
Capacity-coverage analysis of TDD and FDD mode in UMTS at 1920 MHz p51
Carrier-frequency estimation for space-diversity reception over selective channels p58
DC offset and IM2 removal in direct conversion receivers p179
Dual-frequency sounder for UMTS frequency-division duplex channels p117
Fixed channel allocation scheme performance enhancement for cellular mobile systems p232
Fuzzy-based adaptive partial parallel interference canceller for CDMA communication systems over fading channels p111
Generalised approach for evaluation of outage performance in micro- and pico-cellular networks p123
Modified branch metric for turbo codes using PSA technique in Rician fading channels p227
More realistic analysis for blocking probability in SDMA systems p152

New frame-based network allocation vector for 802.11b multirate wireless LANs p147
Nonlinear orthogonal spreading sequence design for third generation DS-CDMA systems p105

MODULATION

Coherent frequency/phase modulation scheme p36
Concatenated wavelet-based ring-TCM p189
Modelling of a VSAT link physical layer fade countermeasure controlled at the data link layer p277
Noncoherent sequence detection of trellis-coded CPFSK with MRC diversity over fading channels p92

MULTIMEDIA

Power-spectrum-based neural-net connection admission control for multimedia networks p70
QoS-guaranteed fuzzy transmission controller for dynamic TDMA protocol in multimedia communication systems p292

NEURAL NETWORKS

Neural approach to detecting communication network events p257
Power-spectrum-based neural-net connection admission control for multimedia networks p70

NUMERICAL ANALYSIS

Accurate error rate estimate using moment method for optimum diversity combining and MMSE equalisation in digital cellular mobile radio p157
Analysis of dynamic service separation with trunk reservation policy p23
Concatenated wavelet-based ring-TCM p189
Generalised approach for evaluation of outage performance in micro- and pico-cellular networks p123
Generalised Berlekamp-Massey algorithm p207
Puncturing effects on turbo codes p132

OPTICAL COMMUNICATION

Allocating wavelength converters in shared-per-link structure in WDM networks p185
Destination-initiating path restoration protocol for wavelength-routed WDM networks p18
Explicit routing with QoS constraints in IP over WDM p83
IP routing by an optical spectral-amplitude-coding CDMA network p265
Multirate asynchronous optical CDMA system with product code p299

OPTICAL SWITCHING

Allocating wavelength converters in shared-per-link structure in WDM networks p185
Destination-initiating path restoration protocol for wavelength-routed WDM networks p18
Explicit routing with QoS constraints in IP over WDM p83

OPTIMISATION

Allocating wavelength converters in shared-per-link structure in WDM networks p185
Explicit routing with QoS constraints in IP over WDM p83
Interleaving and termination in unpunctured symmetric turbo codes p6
QoS-guaranteed fuzzy transmission controller for dynamic TDMA protocol in multimedia communication systems p292

PARALLEL PROCESSING

Least load dispatching algorithm for parallel Web server nodes p223
Neural approach to detecting communication network events p257

PERFORMANCE EVALUATION

Integrated model for performance analysis of multiple class-of-service Internet p139
IP routing by an optical spectral-amplitude-coding CDMA network p265
Neural approach to detecting communication network events p257
Novel TCP congestion control scheme and its performance evaluation p217

RADIO SYSTEMS

Blind equalisation technique based on an improved constant modulus adaptive algorithm p45
Concatenated convolutional and differential codes in interference-suppressed DS-CDMA systems p99
Decorrelating detector for asynchronous CDMA channels with adaptive path selection p167
Markov decision theory framework for resource allocation in LEO satellite constellations p270
Modelling of a VSAT link physical layer fade countermeasure controlled at the data link layer p277
Modified branch metric for turbo codes using PSA technique in Rician fading channels p227
Noncoherent sequence detection of trellis-coded CPFSK with MRC diversity over fading channels p92

RADIOWAVE PROPAGATION

Dual-frequency sounder for UMTS frequency-division duplex channels p117

SIGNAL DETECTION

Blind adaptive receiver for coded multicarrier DS-CDMA systems in multipath fading channels p171
Decorrelating detector for asynchronous CDMA channels with adaptive path selection p167
Fuzzy-based adaptive partial parallel interference canceller for CDMA communication systems over fading channels p111
Noncoherent sequence detection of trellis-coded CPFSK with MRC diversity over fading channels p92

SIGNAL PROCESSING

Subsets of the STM-1 frame-alignment signal: a monitoring analysis p242

STATISTICAL ANALYSIS

Accurate error rate estimate using moment method for optimum diversity combining and MMSE equalisation in digital cellular mobile radio p157
Analysis of dynamic service separation with trunk reservation policy p23
Bounds for finite block-length codes p65
Carrier-frequency estimation for space-diversity reception over selective channels p58
Coherent frequency/phase modulation scheme p36
Concatenated convolutional and differential codes in interference-suppressed DS-CDMA systems p99
Explicit routing with QoS constraints in IP over WDM p83
Generalised approach for evaluation of outage performance in micro- and pico-cellular networks p123
Integrated model for performance analysis of multiple class-of-service Internet p139
Interleaving and termination in unpunctured symmetric turbo codes p6
Markov decision theory framework for resource allocation in LEO satellite constellations p270
Modelling of a VSAT link physical layer fade countermeasure controlled at the data link layer p277
Modified branch metric for turbo codes using PSA technique in Rician fading channels p227
More realistic analysis for blocking probability in SDMA systems p152
Performance analysis of threshold based bandwidth allocation scheme for IP traffic on ATM networks p29
Transmitter buffer behaviour of stop-and-wait ARQ schemes with repeated transmissions p13

SWITCHING THEORY

Analysis of dynamic service separation with trunk reservation policy p23
Fault localisation and recovery in multichannel ATM switches p283
Fault recovery for zoned VP-based ATM networks p211
Multiple additively constrained path selection p237
Performance analysis of threshold based bandwidth allocation scheme for IP traffic on ATM networks p29
Subsets of the STM-1 frame-alignment signal: a monitoring analysis p242

TELECOMMUNICATION

Fault recovery for zoned VP-based ATM networks p211
Novel TCP congestion control scheme and its performance evaluation p217
Power-spectrum-based neural-net connection admission control for multimedia networks p70
QoS-guaranteed fuzzy transmission controller for dynamic TDMA protocol in multimedia communication systems p292
